

SPEED-FLEX™ HOSE

BRAKE SYSTEMS

HYDRAULIC SYSTEMS

Standard automotive flexible brake hoses are manufactured from synthetic rubber and reinforced with multiple layers of fabric braid. They were designed and developed for use with drum brake systems. When disc brakes were developed for racing cars, line pressure requirements increased considerably. With the larger and heavier cars, like Ford's GT-40s, enough of the available brake pedal travel was used up in expanding the flexible brake hoses so that there was insufficient pedal travel left for safe braking.

In the mid-1960s, Earl's pioneered the use of armored flex hose of extruded Teflon to solve this problem. The stiffness of the Teflon liner combined with the tightly woven high tensile stainless steel outer braid solved the pedal travel problem. By eliminating the line swell it also dramatically increased the firmness and feel of the brake pedal which allowed the drivers to modulate the brakes more efficiently. Improved abrasion resistance and increased temperature capacity are secondary advantages.

Since brake actuation produces high pressure with very little fluid displacement, we recommend -2 & -3 SPEED-FLEX™ for brake systems. Clutch actuation, on the other hand, requires moderate pressure but considerable displacement of fluid. For hydraulic clutch systems we recommend the use of -4 SPEED-FLEX™.

FUEL & LUBRICATION SYSTEMS

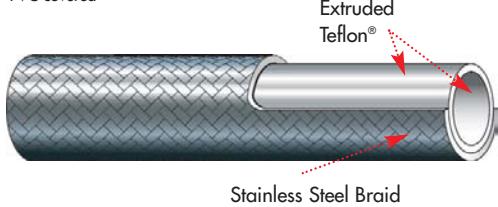

In recent years various fuel manufacturers have added any number of new unpublished additives to their blends rendering some of them incompatible with synthetic rubber lined hose. Earl's Speed-Flex™ Teflon™ lined stainless braided hose is impervious to any automotive fuel blend known to us and may be the best choice for use with modern racing gasolines. All SPEED-FLEX™ hoses are compatible with gasoline, hydrocarbon fuels, alcohols, nitro-methane, mineral and synthetic lubricants, and high density fuel additives. Size 6 and 8 are carbon lined to dissipate static electricity.

Some caution is necessary in the selection of armored Teflon™ hose. The Teflon liner is manufactured in two wall thicknesses, commercial (.030") and aircraft specification (.040"), Earl's uses the thicker and stronger wall. There are also hoses in the marketplace manufactured in such a manner that the stainless braid is loose on the Teflon liner. These hoses offer good pressure capacity but limited expansion resistance. **Earl's SPEED-FLEX™ hose is the standard of the industry.**

** PVC covered

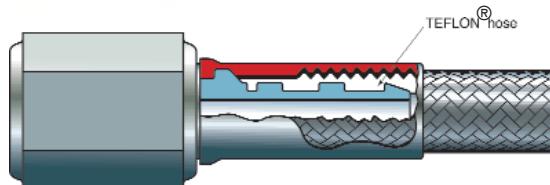

When considering the replacement of stock rubber brake hoses with stainless braid-protected hose of **extruded Teflon®** you should consider the following facts:

Speed-Flex hose is intended for use with Speed-Seal hose ends only. No other Earl's hose end is intended for use with Speed-Flex hose. The use of other manufacturers hose ends is not recommended. The use of stainless braid protected Teflon brake hose assemblies will result in a firmer brake pedal, improved brake pedal "feel" and better brake modulation. These hoses will not necessarily provide longer hose life or any other advantage. We have independent test lab reports on file showing that prototype assemblies exceeded D.O.T. recommendations in all categories. The only continuing test program however, is a 4000 P.S.I. hydrostatic pressure test of every assembly that we make. We do not claim that any individual hose assembly is certifiable to D.O.T. standards and we therefore must advise you that they are sold to be used on off-road applications only. We make no claim of usability or suitability for highway or road use. Teflon brake hoses must be installed by an experienced professional mechanic. After installation each hose must be both clean and free flowing. There must be no possibility that the installed hose assemblies can stretch, crimp or kink under any conditions of wheel travel and steering angle. As with any hose installation, periodic inspection of hose condition is essential.

® Teflon is a registered trademark of Du Pont.

BRAKE SYSTEMS

CONSTRUCTION: These factory assembled hoses are made from the same SPEED-FLEX™ stainless steel braid protected hose of extruded teflon that is the world wide standard of the racing industry for flexible brake, clutch and instrument hoses. Hoses are assembled with Earl's SPEED-FLEX™ crimp and/or swaged permanently installed hose ends. Each hose is pressure tested to 4,000 psi.

MAXIMUM OPERATING PRESSURE: 2,000 psi.

APPLICATION:

- Medium pressure hydraulic systems
- Flexible brake and clutch hoses
- Instrument hoses (most racing sanctioning bodies forbid the use of unarmored hoses in the cockpit area)
- Available in many configurations in lengths from 6" to 72"

Refer to the adapter section for adapter fittings, banjo bolts and plumbing accessories section for crush washers for use with these hoses.

*Teflon is a Du Pont trademark.

ALUMINUM SPEED-SEAL: EARL'S ALUMINUM SPEED-SEAL HOSE ENDS ARE NOT RECOMMENDED FOR USE ON AUTOMOTIVE BRAKE SYSTEMS. AVOIDANCE OF OVER TORQUING IS ESPECIALLY IMPORTANT WITH ALUMINUM SOCKETS.

TO REDUCE brake line swell under extreme pressure and consequent loss of pedal travel and firmness, stainless braid protected hose of extruded teflon® (Earl's SPEED-FLEX) is used throughout the racing industry as flexible brake and clutch hoses. Earl's proven record of reliability and unmatched range of configurations has made SPEED-SEAL reusable hose ends the choice of professional race teams world wide. Since brake system hose ends are often subject to fatigue from extreme vibration, Earl's adjustable SPEED-SEAL -3 forged hose ends feature an 80% greater wall thickness than those of our competitors. In recent years various fuel manufacturers have added any number of new unpublished additives to their blends rendering some of them incompatible with synthetic rubber lined hose. Earl's Speed-Flex teflon lined stainless braided hose is impervious to any automotive fuel blend known to us and may be the best choice for use with modern racing gasolines. All SPEED-FLEX hoses are compatible with gasoline,

hydrocarbon fuels, alcohols, nitro-methane, mineral and synthetic lubricants, and high density fuel additives. Not recommended for use with any other manufacturer's hose. (Not for use with any other Earl's hose.) Some caution is necessary in the selection of armored teflon hose. The teflon® liner is manufactured in two wall thicknesses, commercial (.030") and aircraft specifications (.040"). Earl's uses the thicker and stronger wall. There are also hoses in the marketplace manufactured in such a manner that the stainless braid is loose on the teflon liner. These hoses offer good pressure capacity but limited expansion resistance.

SPEED-SEAL hose ends are available in stainless steel, steel and anodized aluminum, in both low profile and bent tube construction and in adjustable and non-adjustable configurations.

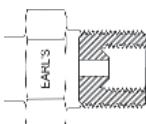

The high performance plumbing industry offers two wall thicknesses in stainless braid protected extruded teflon hose—Earl's utilizes the thicker and stronger .040 wall thickness. This means that Earl's SPEED-SEAL hose ends are not compatible with thin walled hose from other sources.

In order to adjust the radial positioning of Earl's adjustable SPEED-SEAL hose ends, first loosen the swivel nut approximately 1/2 turn. Adjust the hose end and then retighten the swivel nut. Do not attempt to adjust the hose end without loosening the swivel nut.

NOTE: As listed Earl's offers many configurations of adjustable and non-adjustable Banjo hose ends in both the U.S. .425" and the U.K. and European 8mm heights. It is important to use the correct Banjo bolts for each height.

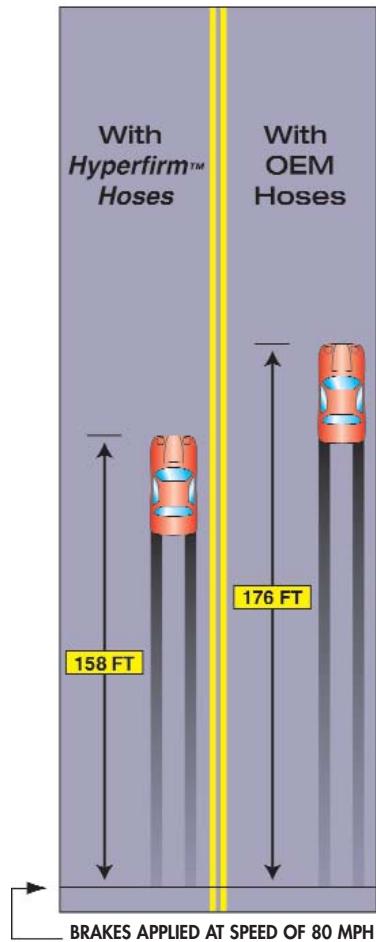

Aluminum SPEED-SEAL:
Earl's aluminum SPEED-SEAL hose ends are not recommended for use on automotive brake systems. Avoidance of over torquing is especially important with aluminum sockets.

HYPERFIRM™ BRAKE LINE KITS

BRAKE SYSTEMS

AVERAGE STOPPING DISTANCE

HYPERFIRM® brake hoses not only meet all D.O.T., T.U.V and J.W.A. standards and specifications for flexible brake hoses, including SAE J 1401 (Jan 81) and FMVSS 106-74-38 FR31302 1973. They are individually inspected and tested before shipment. Batch testing, the industry standard, is not acceptable at Earl's. Each individual hose assembly is pressure tested at 4000 psi after manufacture.

Serious race car owners have used flexible brake hoses of extruded Teflon™ for decades. They are protected against abrasion and swelling by a sheath of tightly braided stainless steel wire. The resistance to "line swell" both improves the firmness or "feel" of the brake pedal and reduces the time required for effective pressure to reach the brakes and begin to slow the car.

Equally important in street vehicles, improvement in pedal firmness and feel make brake modulation easier and more efficient—right up to the time that the anti-lock brake system is actuated. The familiar brake pedal "thump" of anti-lock brake systems is significantly reduced. The decreased system reaction time reduces stopping distance in emergency situations—as much as 18 feet at 80 miles per hour.

The Teflon™/stainless steel brake hoses have not been available for legal use on street driven vehicles until recently. All safety-related components on street vehicles must meet stringent requirements and tests set forth by the National Highway Traffic Safety Administration of the U.S. Department of Transportation. The most demanding test for brake hoses is the "whip test," designed to simulate the continuous flexing of the hoses during suspension and steering movement. Until Earl's developed and patented their exclusive "whip dampener," Teflon™/stainless steel hoses were not able to pass this extremely rigorous test.

The D.O.T. does not "approve" any products. It calls out specifications and test procedures that the components must meet. The manufacturers then self-certify that they are in compliance. The D.O.T. may randomly require that components be tested by an independent certified laboratory selected by the D.O.T.

This illustration represents the results of our initial comparison testing. The vehicle used was a 1996 Toyota Supra, equipped with anti-lock brakes. Professional drivers were used on a closed course.

CERTAIN HYPER FIRM BRAKE HOSE ASSEMBLIES ARE COVERED BY US PATENT NO. 5,908,090.

HYPERRFIRM™ U-SPEC-IT™ KITS

BRAKE SYSTEMS

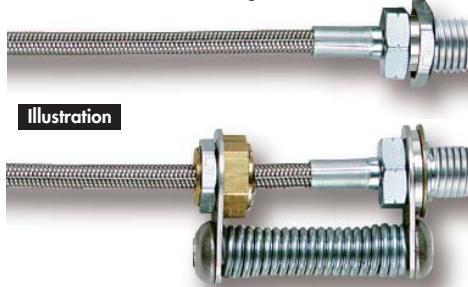

The U-SPEC-IT™ System is designed to reduce the inventory requirements of the dealer or installer. Each hose assembly is certified by Earl's to pass all D.O.T. test requirements of SAE J 1401 for an assembly of its specific length.

Brake hoses not only meet all D.O.T., T.U.V. and J.W.A. standards and specifications for flexible brake hoses including SAE J 1401 (Jan 81) and FMVSS 106-74-38 FR31302 1973, they are individually inspected and tested before shipment. Batch testing, the industry standard, is not acceptable at Earl's. Each individual hose assembly is pressure tested at 4000 psi after manufacture.

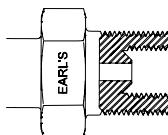

It remains the responsibility of the installer to select the proper hose length and the correct adapter fittings for a specific application. Be absolutely certain that the mechanic doing your installation is qualified to do the job.

STYLE A - Available in lengths of 9"-11" & 18"-28"

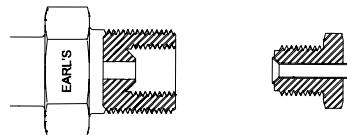

STYLE B - Available in lengths of 12"-17"

280103_ERL

**3/8"-24 INVERTED FLARE,
FEMALE CHASSIS MOUNT**

280104_ERL

**10MM X 1.0 INVERTED FLARE,
FEMALE CHASSIS MOUNT**

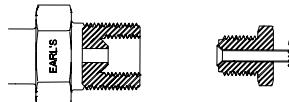

_ERL = length of hose in inches

NOTE:

12" to 17" brake hoses include
Earl's patented whip dampener.

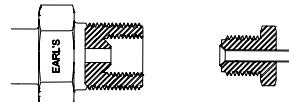

All hoses are supplied with a
female AN-3 on one end.

CHASSIS MOUNT**

BRAKE SYSTEMS

Brake bleeding has always been an inconvenient and messy job. Commercial shops typically use an expensive pressure bleeder—which, unless used properly, can introduce air bubbles into the system through cavitation. Vacuum bleeders are less expensive but can also introduce air into the system.

The time honored manual method (still universally used in racing) requires two people: one to pump the pedal, and another to open and close each bleed screw in sequence. Again, proper procedure and coordination are required to prevent air inclusion.

Earl's SOLO-BLEED™ bleeders solve both problems. A direct replacement for the original equipment bleeders, SOLO-BLEED™ allows one person to safely bleed brakes without a mess and with no chance of air inclusion.
